

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph at page 7, lines 6-11 with the following amended paragraph:

When the method above employs the device provided by the present invention, the pad is applied by said pressure applying means to the leg of a patient suffering from ulcers, lymphoedema or deep vein thrombosis and so that, in use, the device delivers vibrations in the leg of the patient at a frequency of between 20 and 50 Hz, and with an RMS acceleration in the axial direction of the tibial bone of between 5 and 15 ms⁻², and in a radial plane with respect to the tibial bone with an RMS acceleration of between 2 and 5 ms⁻². The acronym RMS is well known in mathematics, science, and engineering for the “root mean square.”
